Service overview

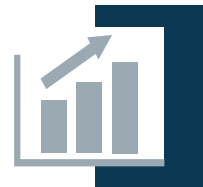

Pipeline tracker:

This is a databook of project level details for possible bidders. We offer bespoke qualitative analysis of buckets and where your project sits as per a RAG analysis/ranking matrix.

Auction simulation model:

Our Auction Simulation Model provides a bid stack and sensitivity analysis at a project specific level. This offers bespoke sensitivity and competitor analysis.

All-Island forward curve:

Provides a base case scenario from our wholesale forward curve by providing projections of wholesale electricity market prices up to 2050, including negative price projections and capture prices by technology.

Bidding strategy workshop:

Workshop to discuss our outlook for RESS 3, competitor landscape, key risks, possible mitigation, merit order placement of client's bid as per our bid stack. This helps you understand your position in the bid stack and potential risks.
